PROJECT DATA
Project Title: HEC-RAS ROUGE
Project File : HEC.prj
Run Date and Time: 9/8/2016 11:11:11 AM

Project in SI units

Project Description:
HEC-RAS model for creek crossings along the proposed 407 TWY Ph 2 started
from scratch

PLAN DATA

Plan Title: Plan 07
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\ROUGE\HEC-RAS ROU\HEC.p07

Geometry Title: WC21-PROP (4.5 x 2)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\ROUGE\HEC-RAS ROU\HEC.g23

Flow Title : WC#21 - Chicago 4hr (Known WS)
Flow File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\ROUGE\HEC-RAS ROU\HEC.f10

Plan Summary Information:
Number of: Cross Sections = 3 Multiple Openings = 0
Culverts = 1 Inline Structures = 0
Bridges = 0 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Warning: Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.
Note: During the supercritical analysis, the water surface at the inlet was within 0.01 feet of normal depth. Therefore, the outlet will be at normal depth.
Note: The flow in the culvert is entirely supercritical.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 1/20/2016 12:00:05 AM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. - Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 80
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p80

Geometry Title: WC30-EX
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g01

Flow Title   : WC30-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f08

Plan Summary Information:
Number of: Cross Sections =   3   Multiple Openings =   0
            Culverts   =   0   Inline Structures =   0
            Bridges   =   0   Lateral Structures =   0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance

Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth
for the water surface and continued on with the calculations.
Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the
need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program
defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 9:09:58 AM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 21
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p21

Geometry Title: WC30-PROP (6 x 2.5)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g17

Flow Title   : WC30-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f08

Plan Summary Information:
Number of: Cross Sections = 3   Multiple Openings = 0
            Culverts   = 1   Inline Structures = 0
            Bridges   = 0   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 1/20/2016 12:11:30 AM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. - Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 81
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p81

Geometry Title: WC35-EX
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g03

Flow Title   : WC35-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f09

Plan Summary Information:

Number of:	Cross Sections	= 4	Multiple Openings	=	0
	Culverts	= 0	Inline Structures	=	0
	Bridges	= 0	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance

Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth
for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the
need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program
defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth
for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the
need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program
defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 11:43:26 AM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 22
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p22

Geometry Title: WC35-PROP (6 x 2.5)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g20

Flow Title   : WC35-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f09

Plan Summary Information:
Number of: Cross Sections = 4   Multiple Openings = 0
            Culverts   = 1   Inline Structures = 0
            Bridges   = 0   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/30/2016 2:18:34 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 38
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p38

Geometry Title: WC36-EX (407 ETR)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g11

Flow Title   : WC36-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f10

Plan Summary Information:
Number of: Cross Sections = 8 Multiple Openings = 0
            Culverts   = 1 Inline Structures = 0
            Bridges   = 0 Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/30/2016 2:40:46 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 39
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p39

Geometry Title: WC36-PROP (6 x 1.75) (407 ETR)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g12

Flow Title   : WC36-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f10

Plan Summary Information:
Number of: Cross Sections = 8 Multiple Openings = 0
            Culverts   = 3 Inline Structures = 0
            Bridges   = 0 Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 1/20/2016 5:09:27 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 01
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p01

Geometry Title: WC37-EX
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g06

Flow Title : WC37-4hr CH
Flow File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f13

Plan Summary Information:
Number of: Cross Sections = 4 Multiple Openings = 0
Culverts = 0 Inline Structures = 0
Bridges = 0 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

C & E Loss (m)	0.01	Cum SA (1000 m2)		2.09	

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 12:24:32 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 25
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p25

Geometry Title: WC37-PROP (6 x 2)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g19

Flow Title   : WC37-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f13

Plan Summary Information:
Number of: Cross Sections = 4   Multiple Openings = 0
            Culverts   = 1   Inline Structures = 0
            Bridges   = 0   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 1:41:07 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 26
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p26

Geometry Title: WC41-PROP (6x2.5)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g21

Flow Title   : WC41-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f12

Plan Summary Information:
Number of: Cross Sections = 4   Multiple Openings = 0
            Culverts   = 1   Inline Structures = 0
            Bridges   = 0   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 1:48:31 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 27
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p27

Geometry Title: WC43-EX (407 ETR)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g13

Flow Title : WC43-4hr CH
Flow File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f14

Plan Summary Information:
Number of: Cross Sections = 4 Multiple Openings = 0
Culverts = 1 Inline Structures = 0
Bridges = 0 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

Warning: Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 1:51:01 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 28
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p28

Geometry Title: WC43-PROP (5 x 2) (407 ETR)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g14

Flow Title   : WC43-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f14

Plan Summary Information:
Number of: Cross Sections = 4   Multiple Openings = 0
            Culverts   = 2   Inline Structures = 0
            Bridges   = 0   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Warning: Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section
         downstream of the culvert has supercritical flow.
Note:    During supercritical analysis, the culvert direct step method went to normal depth.  The program then assumed
         normal depth at the outlet.
Note:    The flow in the culvert is entirely supercritical.

Warning: During subcritical analysis, with the exit loss set =1.0, the projected WSEL in culvert has a lower energy than the downstream energy. Most likely, the downstream cross section blocks part of the culvert or the ineffective area is set too far in. Instead of projecting the WSEL, the program did an energy balance to get the WSEL inside the culvert at the downstream end.
Note: During subcritical analysis, the culvert direct step method, the solution went to normal depth.

Culv Crt Depth (m)	0.12	Min El Weir Flow (m)	200.00

Warning: During subcritical analysis, with the exit loss set =1.0, the projected WSEL in culvert has a lower energy than the downstream energy. Most likely, the downstream cross section blocks part of the culvert or the ineffective area is set too far in. Instead of projecting the WSEL, the program did an energy balance to get the WSEL inside the culvert at the downstream end.
Note: During subcritical analysis, the culvert direct step method, the solution went to normal depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Plan Summary Information:
Number of: Cross Sections = 5 Multiple Openings = 0
Culverts = 0 Inline Structures = 0
Bridges = 1 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

Upstream Embankment side slope              =       2 horiz. to 1.0 vertical
Downstream Embankment side slope            =       2 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow =     .98
Elevation at which weir flow begins         =
Energy head used in spillway design         =
Spillway height used in design              =
Weir crest shape                            = Broad Crested

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Energy Only

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

PROJECT DATA
Project Title: 407TWY-DUFFINS
Project File : 407TWY-DUFFINS.prj
Run Date and Time: 9/21/2016 2:04:25 PM

Project in SI units

Project Description:
HEC-RAS Model created for 407 TWY project from Kennedy Rd. to Brock Rd. -
Duffins Creek Watershed

PLAN DATA

Plan Title: Plan 30
Plan File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.p30

Geometry Title: WC44-PROP (407 ETR)
Geometry File : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.g16

Flow Title   : WC44-4hr CH
Flow File   : j:\Division\Water\Projects\MARKHAM\TT4022 - 407TWY Phase 2\DESIGN\HEC-RAS\DUFFINS\407TWY-DUFFINS\407TWY-DUFFINS.f15

Plan Summary Information:
Number of: Cross Sections = 5   Multiple Openings = 0
            Culverts   = 0   Inline Structures = 0
            Bridges   = 2   Lateral Structures = 0

Computational Information
    Water surface calculation tolerance = 0.01
    Critical depth calculation tolerance = 0.01
    Maximum number of iterations   = 20
    Maximum difference tolerance   = 0.3
    Flow tolerance factor   = 0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method: Average Conveyance
    Computational Flow Regime: Subcritical Flow

Upstream Embankment side slope              =       2 horiz. to 1.0 vertical
Downstream Embankment side slope            =       2 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow =     .98
Elevation at which weir flow begins         =
Energy head used in spillway design         =
Spillway height used in design              =
Weir crest shape                            = Broad Crested

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Energy Only

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical
         depth for the water surface and continued on with the calculations.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate
         the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
         water surface came back below critical depth.  This indicates that there is not a valid subcritical answer.  The
         program defaulted to critical depth.

Upstream Embankment side slope              =       2 horiz. to 1.0 vertical
Downstream Embankment side slope            =       2 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow =     .98
Elevation at which weir flow begins         =   194.5
Energy head used in spillway design         =
Spillway height used in design              =
Weir crest shape                            = Broad Crested

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Energy Only

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line
